FIG.-2

This technical drawing illustrates a medical device, possibly a catheter or probe, with a complex internal structure. The device is shown in a perspective view, with a cross-section of the tip area. Key components and labels include:

- 10**: The main body of the device, which is curved and flexible.
- 20**: A bracketed section indicating a specific part of the device, likely the handle or control mechanism.
- 21**: A vertical channel or lumen running through the center of the device.
- 22**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 23**: A curved arrow indicating a direction of movement or flow within the device.
- 24**: A cross-section of the device's tip, showing internal channels and a flexible, curved section.
- 32**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 33**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 321**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 322**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 323**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 324**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 325**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 326**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 327**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 521**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 522**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 523**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 524**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 525**: A curved, flexible section of the device, possibly a catheter tip or a probe head.
- 526**: A curved, flexible section of the device, possibly a catheter tip or a probe head.

The drawing includes several arrows indicating the direction of flow or movement within the device, suggesting a complex internal structure with multiple channels and flexible sections.
